PROJECTS

Interactive SQL Injection Vulnerability Lab | *Python, Flask, SQLite, OWASP*

- Built a hands-on SQLi lab with vulnerable, broken-fix, and secure login flows plus blind SQLi missions.
- Implemented payload playbook, attack logging, and query highlighting for educational threat analysis.
- Deployed on Render to demonstrate real-world injection risks and secure mitigation patterns.

Network Vulnerability Scanner Tool | *Python, Flask, Socket, Threading, Matplotlib*

- Developed a Python-based vulnerability scanner to detect open ports and identify risky network services.
- Implemented multi-threaded TCP Connect Scanning, reducing scan time by 50%.
- Designed automated vulnerability reporting with risk levels and deployed a Flask dashboard on Render; visualized scan progress with Matplotlib.

Password Strength Analyzer & Breach Checker | *JavaScript, Have I Been Pwned API, Netlify*

- Built a password strength analyzer with entropy scoring, crack-time estimates, and breach lookup via HIBP k-anonymity.
- Created a matrix-themed UI with password generator and real-time strength feedback for users.
